DETAILED ACTION

1. This Office Action is in response to the communication filed on August 23, 2011, which paper has been placed of record in the file.
2. Claims **1 and 6-22** are pending in this application.

Examiner's Amendment

3. An examiner's amendment to the record appears below. Should the changes and/or additions be unacceptable to applicant, an amendment may be filed as provided by 37 CFR 1.312. To ensure consideration of such an amendment, it MUST be submitted no later than the payment of the issue fee.

Amending claim 1 as the following:

Replacing the phrase "**may be**" (line 16, words 12-13) by "**is**"

Allowable Subject Matter/Reasons for Allowance

4. Claim **1** is allowed over the prior arts cited records.

The closest prior arts are:

- 1) Boies (US 6,006,200) discloses a customer's shipping address is encoded by a multi-digit identifier which is stored in the database of a trusted third party, preferably the shipping company. A user of the system need only identify themselves to a vendor by this multi-digit identifier which prints the identifier in machine readable form on a package delivered to the shipper.

2) Moore (US 5,452,203) discloses storing a database of postal addresses in the computer structure, structure for storing a list of shipping addresses in the computer structure, the computer structure programmed for determining whether each address stored in the shipping list storing structure and which was not previously compared to any address stored in the database storing structure compares to any address stored therein, the computer structure programmed for determining whether each postal address to which any shipping list address compares is a post office box postal address, and the computer structure programmed for storing in the shipping list storing structure said each postal address which is not a post office box postal address.

3) Whitehouse (US 6,005,945) discloses a system for electronic distribution of postage includes at least one secure central computer for generating postal indicia in response to postage requests submitted by end user computers, and at least one postal authority computer system for processing the postal indicia on mail pieces. A secure central computer includes a database of information concerning user accounts of users authorized to request postal indicia from the secure central computer. A request validation procedure authenticates received postage requests with respect to the user account information in the database. A postal indicia creation procedure, applies a secret encryption key to information in each authenticated postage request so as to generate a digital signature and combines the information in each authenticated postage request with the corresponding generated digital signature so as to generate a digital postage indicium in accordance with a predefined postage indicium data format.

4) Allum (US 5,420,403) discloses mail can be sorted automatically to point of delivery level by deriving from the address including postal code on a piece of mail a suffix which together with the postal code forms routing data which uniquely identifies the final delivery address. This is achieved automatically at the Post office sorting facility by means of an optical character reader which reads the addresses on mail items and a computer arranged to generate a suffix based on the address read. The routing data is printed as a bar code on the mail item and this allows the complete sortation to be effected automatically. Also contemplated is a progressive encoding system which can be applied as bar codes by customers as desired to mail pieces. The basic data is the routing data set to which can be added a shipment number which allows automatic revenue accounting control and a piece number which allows automatic track and trace.

Therefore, it is clear from the description of Boies's, Moore, Whitehous and Allum's inventions that the cited prior arts do not consider the possibility of: assigning a virtual post office box identification for individual recipients; relating by the computer recipient's virtual post office box with the desired delivery address of the recipients; and determining in one or more data bases that recipient's name is listed with recipient's desired delivery address and is the address to which the owner of the virtual post office box wants the mail forwarded, wherein the forwarding information is sent by telephone, physical mail, or facsimile, as included in claim 1.

5. Claims 6-22 are allowed because they are dependent claims of the allowable independent claim 1 above.
